

Your model never read your spec. It just **sounds like it did.**

Why pasting a document is not the same as knowing it.

Ask about your own spec, and it answers about specs in general.

The model never saw your document. Even uploaded, a 400-page PDF dumped into context is mostly noise it has to search through again on every single question.

24-51x

more tokens burned when a raw PDF is dumped into context instead of being structured once, up front.

Pay the indexing cost once, or pay the search cost **every time**.

This is not an AI idea. It is why databases have indexes, why projects keep a drawing register, and why a BOQ is itemised instead of written as one long paragraph.

Convert one spec. Ask a question you already know the answer to.

If it answers correctly, you gained a tool. If it answers wrong, you gained something bigger: proof of how confidently it was misleading you before.

The tool is new. The lesson is older than software.

Structure the knowledge once, and every question after it gets cheaper, faster, and actually correct.
