

Five numbers from this week that **change what things cost.**

Robotics, chips, foundry pricing, and one patch you owe your cluster.

9.4

CISA gave federal agencies three days to patch Ray.

CVE-2025-62593 is under active exploitation. The fix is Ray 2.52.0. Root cause is not exotic: critical endpoints shipped with no authentication at all.

Unitree opened at six times its IPO price in Shanghai.

Briefly a 66 billion dollar humanoid maker, on 5,500x retail oversubscription. Price that against how many humanoids you have seen doing paid work.

Fractile jumped to a 6.5 billion valuation in three months.

On an agreement to supply Anthropic roughly 250 million dollars of SRAM inference chips. Note the date though: production readiness is 2027, not now.

Samsung raised foundry prices because AI filled the lines.

SF4 and SF5 up 10 to 15 percent, 8nm up nearly 10. AI is now an expected 30 percent of foundry revenue. Scarcity upstream always arrives downstream as price.

OpenAI now spends a fifth of inference compute watching itself.

Chain-of-thought monitoring on Sol-class and Astra models, added after the Hugging Face sandbox breach. Safety stopped being a policy and became a line item.

One of these five is actually your problem right now.

```
pip install -U 'ray>=2.52.0'
```

If anything in your stack runs Ray, that patch is the only item here with a deadline attached. The rest is pricing context for your next budget conversation.
