

RAG is not magic. It is a fix for a **lazy model**.

Why retrieval exists, and what it actually costs you.

Samy Yusif

AI Products Section Head

Ask it about your own contract. It answers with total confidence.

That confidence is not correctness. The model never saw your document. It is pattern-matching everything else it has read, then presenting the result as fact.

61%

of unsourced answers on domain-specific documents
contain at least one fabricated detail.

Retrieval is not intelligence. It is **supervision.**

You are not making the model smarter. You are removing its excuse to guess, by putting the source in front of it before it answers.

Samy Yusif

Keep this for the next time someone sells you a model.

The question is never how smart it is. The question is what it was allowed to read before it spoke.
